### 谁吃了我的flag :50

Description

呜呜呜，Mki一起床发现写好的题目变成这样了，是因为昨天没有好好关机吗T\_T **hint: 据当事人回忆，那个夜晚他正在用vim编写题目页面，似乎没有保存就关机睡觉去了,现在就是后悔，十分的后悔。**

URL <http://118.25.111.31:10086/index.html>

Base Score 50

Now Score 50

User solved 250

错误姿势：

（一开始没有hint）刚拿到题，直接bp看请求头和回应，发现

```
GET /index.html HTTP/1.1
```

```
Host: 118.25.111.31:10086
```

```
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:64.0) Gecko/20100101 Firefox/64.0
```

```
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
```

```
Accept-Language: zh-CN,zh;q=0.8,zh-TW;q=0.7,zh-HK;q=0.5,en-US;q=0.3,en;q=0.2
```

```
Accept-Encoding: gzip, deflate
```

```
Connection: close
```

```
Upgrade-Insecure-Requests: 1
```

```
X-Forwarded-For: 127.0.0.1
```

```
HTTP/1.1 200 OK
Server: nginx/1.15.8
Date: Fri, 01 Feb 2019 11:43:46 GMT
Content-Type: text/html
Content-Length: 319
Last-Modified: Fri, 25 Jan 2019 08:10:00 GMT
Connection: close
ETag: "5c4ac458-13f"
Accept-Ranges: bytes
```

```
<!DOCTYPE HTML>
<html>
  <head>
    <title>who eat my flag??</title>
  </head>
  <body>
    <p>damn...hgame2019 is coming soon, but the stupid Mki haven't finished his
web-challenge...</p>
    <br>
    <p>fine, nothing serious, just give you flag this time...</p>
    <br>
    <p>the flag is hgame{3eek_diScI0Sure
  </body>
</html>
```

F5刷新后，头变成了：

```
GET /index.html HTTP/1.1
Host: 118.25.111.31:10086
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:64.0) Gecko/20100101 Firefox/64.0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Language: zh-CN,zh;q=0.8,zh-TW;q=0.7,zh-HK;q=0.5,en-US;q=0.3,en;q=0.2
Accept-Encoding: gzip, deflate
Connection: close
Cookie: BL_D_PROV=undefined; BL_T_PROV=undefined
Upgrade-Insecure-Requests: 1
X-Forwarded-For: 127.0.0.1
If-Modified-Since: Fri, 25 Jan 2019 08:10:00 GMT
If-None-Match: "5c4ac458-13f"
Cache-Control: max-age=0
```

然后花了大把时间去研究 If-Modified-Since, If-None-Match, Last-Modified, ETag这些东西的含义和神奇作用，然后就没有然后了。。。。

正确解法：

看到hint瞬间想到vim未保存就退出造成的问题，

具体见: [参考博客](#)

结论: [payload\(http://118.25.111.31:10086/.index.html.swp\)](http://118.25.111.31:10086/.index.html.swp)

打开下载的文件即可看到:

```
b0VIM 8.0tPE\💎💎💎(mki603arrival~mki603/mki/hgame/week1/web1/index.htmlutf-8 U3210#"! Utp :  
the flag is hgame{3eek_diScI0Sure_fRom+wEbsit@}  
fine, nothing serious, just give you flag this time...
```

damn...hgame2019 is coming soon, but the stupid Mki haven't finished his web-challenge...

flag: **hgame{3eek\_diScI0Sure\_fRom+wEbsit@}**

## 换头大战 :100

Description

想要flag嘛 工具: burpsuite postman hackbar 怎么用去百度, 相信你可以的

URL <http://120.78.184.111:8080/week1/how/index.php>

Base Score 100

Now Score 100

User solved 267

解题姿势:

先输入“flag”提交, 发现:

URL里面多了"?want=flag",说明现在是get请求, 明显提示要求我们改成post请求, 我们可以用hint给的那些工具, 我就用HackBar Quantum示范一下, 这个工具是火狐里面的免费插件, 直接去扩展插件里面找就好了。然后就是该X-Forwarded-For: 127.0.0.1, 然后就是referer...

可以自己操作一下看看。

直接丢ida，F5看代码，代码逻辑很简单，就是异或，还有题目给的提示，可以提取其中一个异或字符串，另一个要看它们的地址，一个一个提取出来，主要看懂代码逻辑，然后仔细将另一个字符串数据提取出来即可，具体看脚本。

脚本：

```
#include<iostream>
#include <cstring>
#include <cstdlib>
using namespace std;
int main()
{
    int result; // eax@2
    signed int i; // [sp+8h] [bp-138h]@3
    int v6[6]; // [sp+10h] [bp-130h]@1
    int v7; // [sp+28h] [bp-118h]@1
    int v8; // [sp+30h] [bp-110h]@1
    int v9; // [sp+38h] [bp-108h]@1
    int v10; // [sp+3Ch] [bp-104h]@1
    int v11; // [sp+40h] [bp-100h]@1
    int v12; // [sp+44h] [bp-FCh]@1

    int v13; // [sp+48h] [bp-F8h]@1
```

```

int v14; // [sp+4Ch] [bp-F4h]@1
int v15; // [sp+50h] [bp-F0h]@1
int v16; // [sp+54h] [bp-ECh]@1
int v17; // [sp+5Ch] [bp-E4h]@1
int v18; // [sp+60h] [bp-E0h]@1

Base Score 100

Now Score 100

User solved 211

送分题，直接读源码，一步一步往下做即可。(notepad++就可以解base64)

题目源码

```

import base64
import hashlib

enc1 = 'hgame{'
enc2 = 'SGVyZV8xc18zYXN5Xw=='
enc3 = 'Pyth0n}'

print 'Welcome to Processor\'s Python Classroom!\n'
print 'Here is Problem One.'
print 'There\'re three parts of the flag.'

```

```
print '-----'

print 'Plz input the first part:'
first = raw_input()
if first == enc1:
    pass
else:
    print 'Sorry , You\'re so vegatable!'
    exit()

print 'Plz input the secend part:'
secend = raw_input()
secend = base64.b64encode(secend)
if secend == enc2:
    pass
else:
    print 'Sorry , You\'re so vegatable!'
    exit()

print 'Plz input the third part:'
third = raw_input()
third = base64.b32decode(third)
if third == enc3:
    pass
else:
    print 'Sorry , You\'re so vegatable!'
    exit()

print 'Oh, You got it !'
```

flag:

```
hgame{Here_1s_3asy_Pyth0n}
```

## pwn

### aaaaaaaaaaaa :50

Description

pwn很简单的，a上去就完事了 nc 118.24.3.214 9999

URL <http://plps4kyke.bkt.clouddn.com/aaaaaaaaaa>

Base Score 50

Now Score 50

User solved 134

pwn我是什么都不懂，直接把东西丢到ida，然后F5 main函数，看代码，

```
int __cdecl main(int argc, const char **argv, const char **envp)
{
    signed int v3; // eax@4
    signed int v5; // [sp+Ch] [bp-4h]@1

    setbuf(_bss_start, 0LL);
    signal(14, handle);
    alarm(0xAu);
    puts("Welcome to PWN'world!let us aaaaaaaaaa!!!");
    v5 = 0;
    while ( 1 )
    {
        v3 = v5++;
        if ( v3 > 99 )
            break;
        if ( getchar() != 97 )
            exit(0);
    }
    system("/bin/sh");
    return 0;
}
```

大致意思应该是输入大于99个a即可getshell。

接下来就是cat flag

## misc

### Hidden Image in LSB :50

Description

Here are some magic codes which can hide information in an ordinary picture, can you extract the hidden image in the provided picture? 其实本来想让大家写写代码，后来干脆就送分了 有个神器叫 stegsolve，利用它可以直接提取本题 flag

URL <http://plir4axuz.bkt.clouddn.com/hgame2019/lsb.zip>

Base Score 50

Now Score 50

User solved 227

直接上神器stegsolve，在Red plane 1时可以看到：

flag:

```
hgame{LSB_is_easy_for_u}
```

## 打字机 :50

Description

Aris(划掉)牌打字机，时尚时尚最时尚~ hint:谷歌有个以图搜图功能很不错，百度识图好垃圾的。。。

Now Score 50

User solved 152

我是直接看的，直接对着键盘对应打出来就好，注意大小写。（没有尝试谷歌。。。）

```
hgame{My_violet_tyPewRiter}
```

## Broken Chest :50

Description

这个箱子坏掉了！快用你无敌的[疯狂钻石]想想办法啊！ 更新一波学习资料<https://ctf-wiki.github.io/ctf-wiki/misc/archive/zip/>

URL <http://plqfgjy5a.bkt.clouddn.com/Broken-Chest.zip>

Base Score 50

Now Score 50

User solved 150

学习资料上面的东西就够了，我们用notepad++或者winhex之类看zip的文件头部和尾部，这里使用的是notepad++加上hex插件发现：

```
OK.....U?N棘□□
嘲".....f1□
ag.txtgI?H.維??□□
ZBI..]U   g渤伟n?□
.吨隣慚縊K..棘嘲□
".....PK.....
....U?N棘嘲"....□□
.....$......
.....flag.txt..
.....>,v??□
?>,v?痹..駘驪?□□□
?PK.....Z.□
..X.....S0mETh1n
g_U5efuL_
```

明显文件头错了，将“O”改为“P”，即可打开，尾部有一串奇怪的东西，先不管。

解压zip发现加密了：

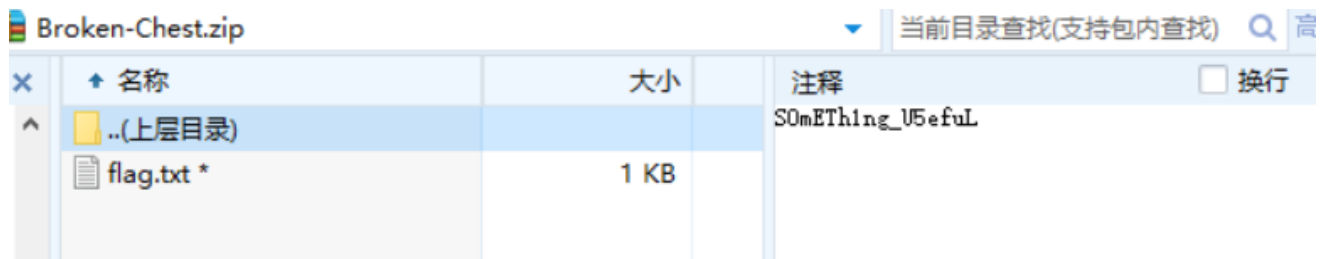

为加密的文件输入密码

Broken-Chest.zip

☐ 显示密码 (勾选可支持中文密码输入)

☐ 将当前密码应用到所有加密文件

用好压打开发现注释:

其实就是文件尾部那串东西, 大概就是密码了。

操作一通, 果然是, done!

flag在flag.txt里面。

flag:

```
hgame{Cra2y_D1aM0nd}
```

## Try :100

Description

无字天书

URL <http://plqfgjy5a.bkt.clouddn.com/try-it.pcapng>

Base Score 100

Now Score 100

User solved 97

用wireshark打开, 追踪tcp协议慢慢查看里面的请求过程, 找到奇怪zip (其实可以直接使用过滤查找特殊字符如 tcp contains "hgame"),找到目标, 先将zip导出, 然后解压, 发现password.txt, open-it.zip.

password.txt

```
hgame*****
```

open-it.zip加密了, 明显的掩码攻击, 使用ARCHPR, 可以百度下载, 先尝试数字简单的东西, 发现

解压zip，发现一个jpg文件，但是这个jpg文件有点大，用notepad++打开发现

```

  4 00 ko流~ .PK..?...[
  0 00 ....鵠2N菽蛭?...[]
  0 00 ?.....$. .... .[]
  0 00 .....1.docx.. .
  4 01 .....菰黏 ?>[]
  4 01 ?"價吃.J7? ?[][][]
  0 00 PK.....X...
      .%. ....

```

发现里面有一个1.docx的文档，用binwalk分离，打开1.docx发现“什么都没有”，都是骗人的。。。

其实有经验的知道docx其实有一个隐藏功能，只要一个小勾就可以解决，具体百度“word显示隐藏文字”。

flag:

```
hgame{59d28413e36019861498e823f3f41406}
```

tKs\_moyDqk{bQf40e}

```
tsmyq{Q4eK_oDkbf0}
```

```
hgame{E4sY_cRypt0}
```

User solved 42

## 题目代码

```
import binascii
import string
import random

def strxor(a, b):
    return "".join(hex(x ^ y)[2:].zfill(2) for (x, y) in zip(a, b))

fp = open('poem.txt', 'rb')
flag = "*****"
strings = fp.readlines()
key = hex(random.randint(2**511, 2**512))[2:]
strs = [strxor(i[:-3], binascii.unhexlify(key)) for i in strings]
result = strxor(flag.encode('utf-8'), binascii.unhexlify(key))
print(strs)
print(result)

...
output:

这个题目需要判断base加密方式，主要考察base64，base32,base16 (这个其实就是将16进制转ASCII)，我这里有个代码示范。至于如何区分，详情百度“base系列”。。。

base16

```

import base64

with open('base32de2.txt', 'r') as f:
    str = f.read()
    flag = base64.b16decode(str)
    f.close()
    with open('base16de3.txt', 'w') as f1:
        f1.write(flag)

```

base32

```
import base64

with open('base32de2.txt', 'r') as f:
    str = f.read()
    flag = base64.b32decode(str)
    f.close()
    with open('base32de3.txt', 'w') as f1:
        f1.write(flag)
```

base64

```
import base64

with open('base32de2.txt', 'r') as f:
    str = f.read()
    flag = base64.b16decode(str)
    f.close()
    with open('base16de3.txt', 'w') as f1:
        f1.write(flag)
```

最终会解密为:

```
base58: 2BAja2VqXoHi9Lo5kfQZBPjq1EmZHGEudM5JyDPREpM53CxrPB8BnC
```

直接去base58在线解密网站, 我没找到。。。

都是找到了一个脚本, 稍微改了一下, (python2)

```
__b58chars = '123456789ABCDEFGHJKLMNPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz'
__b58base = len(__b58chars)

def b58encode(v):
    """ encode v, which is a string of bytes, to base58.
    """

    long_value = int(v.encode("hex_codec"), 16)

    result = ''
    while long_value >= __b58base:
        div, mod = divmod(long_value, __b58base)
        result = __b58chars[mod] + result
        long_value = div
    result = __b58chars[long_value] + result

    # Bitcoin does a little leading-zero-compression:
    # leading 0-bytes in the input become leading-1s
    nPad = 0
    for c in v:
        if c == '\0':
```

```

        nPad += 1
    else:
        break

    return (__b58chars[0] * nPad) + result

def b58decode(v):
    """ decode v into a string of len bytes
    """

    long_value = 0
    for (i, c) in enumerate(v[::-1]):
        long_value += __b58chars.find(c) * (__b58base ** i)

    result = ''
    while long_value >= 256:
        div, mod = divmod(long_value, 256)
        result = chr(mod) + result
        long_value = div
    result = chr(long_value) + result

    nPad = 0
    for c in v:
        if c == __b58chars[0]:
            nPad += 1
        else:
            break

    result = chr(0) * nPad + result
    return result

if __name__ == "__main__":
    print b58decode("2BAja2VqXoHi9Lo5kfQZBPjq1EmZHGEudM5JyDPREpMS3CxrPB8BnC")

```

最终结果为

```
hgame{40ca78cde14458da697066eb4cc7daf6}
```
